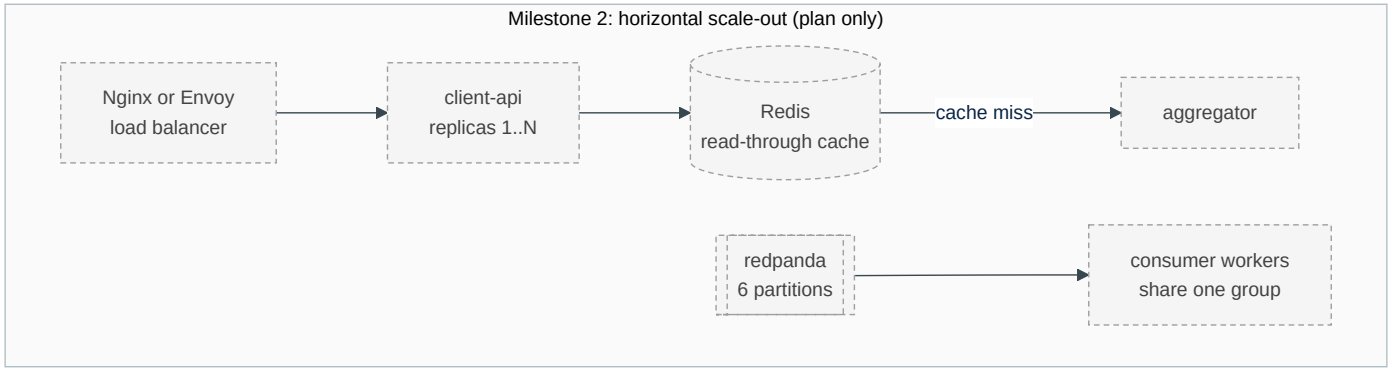
Milestone 1: single-instance baseline (implemented)
client-api :8080
aggregator :8083
canonical-db :5432
redpanda :9092
3 partitions
consumers
1 replica per group



Milestone 2: horizontal scale-out (plan only)
Nginx or Envoy
load balancer
client-api
replicas 1..N
Redis
read-through cache
cache miss
aggregator
redpanda
6 partitions
consumer workers
share one group
